

How to manually draw a path?

- Tap on the screen center dot **1** and on **“Create a placemark...”** **2**;
- Select **“Path”** **3**;
- If you want, type a name in the **“Name”** text field, or change the place where to save the track;
- Tap **“Ok”** **4**.

The edit mode is activated, you can now:

- Move the screen center dot over the start location, tap **“Draw”** **5** to activate the drawing mode and move the screen center dot along the path you want to draw;
- If needed, tap **“Delete”** **6** multiple times to delete the last locations in the backward direction.

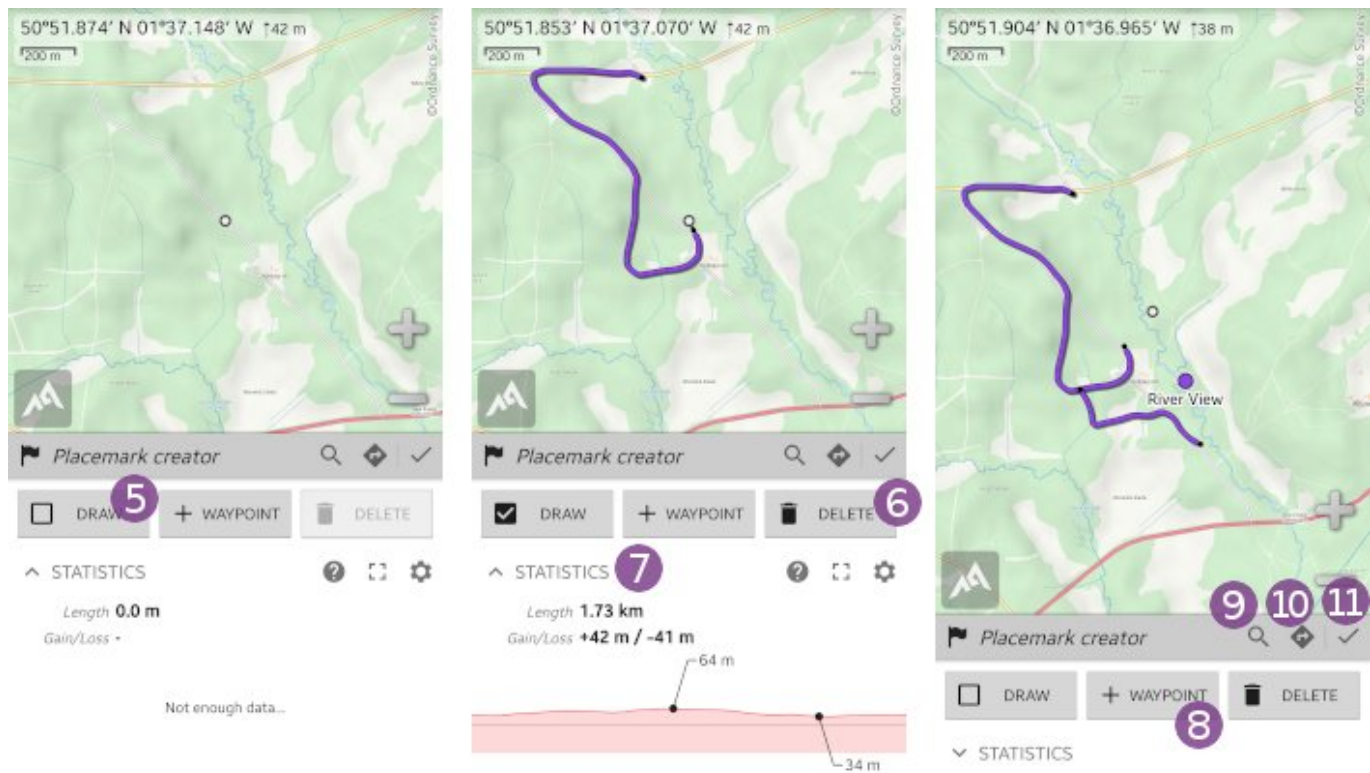

As you draw the path, the statistics update in the below panel. In case you've the [DEM elevations](#) turned on, the elevation profile is also displayed.

i If you need more space, tap **“Statistics”** **7** to hide the statistics panel.

If needed, you can:

- Deactivate and reactivate the drawing mode multiple times to draw distinct path segments;
- Tap **“Waypoint”** **8** to add waypoints associated to the path;
- Tap on the **“Search a location”** **9** icon to jump to remote locations by name or coordinates;
- Tap on then **“Auto-routing”** **10** icon to activate [the auto-routing mode](#).

When you have finished, tap on the **“Save & Close”** **11** icon to save your path and exit from the edit path mode.

How to split or edit points of a path?

- Tap anywhere on the path **1** and on its name **2**;
- Scroll down the menu and choose **“Edit points”** **3** to activate the edit path mode.

When you tap on any location **4**, an edit menu is displayed allowing you to make various actions on the selected location:

- **“Insert here”** **5** to insert new locations from here;
- **“Move to center”** **6** to move this location on to the screen center;
- **“Delete”** **7** to delete this location.

Or on the path segment that contain the selected location:

- **“Edit color”** **8** to change the color of this particular segment (it will override the track color);
- **“Split here”** **9** to split this segment into two different segments at the selected location;
- **“Delete”** **10** to delete the entire segment.

When you have finished, tap on the **“Save & Close”** **11** icon to save your path and exit from the edit path mode.
